

## Churchill Meadows Community

Mississauga, Ontario

iTRANS undertook a study of internal traffic demand, traffic controls, and infrastructure requirements for the 17,000 unit Churchill Meadows Planning District. A traffic calming plan was prepared following a detailed review of alternative calming techniques.

After conducting research into the effectiveness of alternative traffic calming techniques, iTRANS recommended a community traffic calming plan, incorporating a combination of road narrowings (chokers), road surface treatments, school zone designations, and reduced road design standards.
