Claremont (Central Street) Safety Study

Claremont, Ontario

iTRANS managed this detailed safety assessment and strategy project for safety improvements on Central Street through the community of Claremont. The team focused on human factors, while assuming existing and future considerations, pedestrian and vehicular safety issues, defining operational deficiencies, and evaluating alternative solutions.

The recommended solutions comprised of short- and long-term measures. These measures formed the overall vision for inter-regional connecting links passing through a community. The process and outcome of this study also outlines a model for similar urban / rural transition corridors.

Client:

- Durham Region

Services:

- Traffic Safety
