## Halton Safety Improvements Program

Halton, Ontario

The Region of Halton recognized a need to develop a more quantitative approach to identifying problem locations, assessing the merits of potential solutions, and ranking candidate projects.

In response to these needs, iTRANS staff developed a process that combines a quantitative safety analysis tool and the Region's collision data. Today, the Region of Halton is equipped with an automated tool that enables consultants to identify problem locations. The new tool draws on the Region's databases, which record collisions, traffic volumes, and road inventory under one umbrella.

### Client:

- Region of Halton

### Services:

- Traffic Safety
- Software Development
