

# Bathurst Street Environmental Assessment Study

Newmarket, Ontario

Client:  
Region of York

## Services:

- Environmental Assessment
- Traffic Safety
- Traffic Operations
- Travel Forecasting

iTRANS Consulting undertook the transportation assessment for upgrading Bathurst Street between Yonge Street (Regional Road 1) and Green Lane. The two-lane rural arterial is currently discontinuous between Yonge Street and Green Lane.

This study involved the identification of the need and justification for the new link using EMME/2 to prepare short and long-term travel forecasts, the development of alternatives to meet this need, and the analysis and evaluation of alternative routes.

Traffic safety analysis was also conducted to address concerns of the local area residents, external review agencies, and municipal representatives.
