

Bloor Danforth Subway Westerly Extension

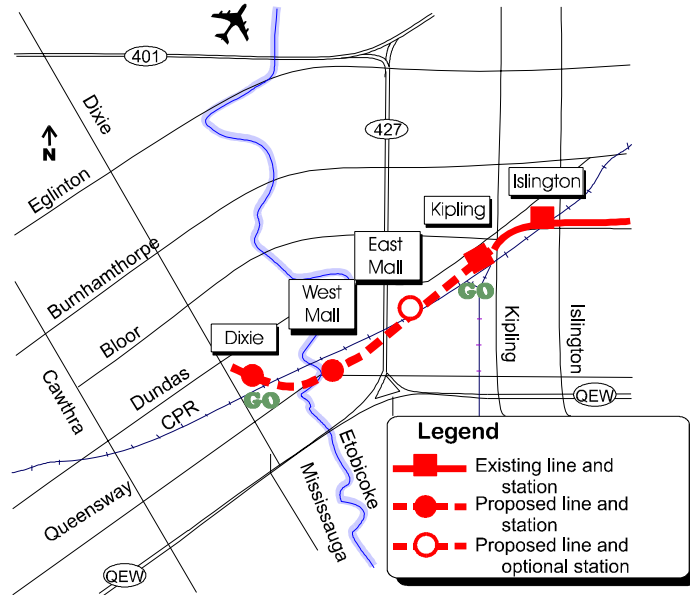

Toronto, Ontario

Client:

Toronto Transit Commission

Services:

- Environmental Assessment
- Public Transit

Staff of iTRANS completed the Environmental Assessment study for the westerly extension of the Bloor-Danforth Subway System from its present terminus at Kipling Station to its proposed terminus at the Dixie Road/Dundas Street intersection.

This study established the need and justification for the subway extension as part of an area transportation network, and examined a total of ten extension alternatives. These were evaluated systematically using both qualitative and numerical evaluation methodologies, to identify the preferred alignment.

Extensive public consultation involved property owners, interest groups, the general public, public officials, affected ministries and agencies, and utilities.
