

Mississauga Road Environmental Assessment Study

Brampton, Ontario

Client:

Region of Peel

Services:

- Traffic Operations
- Highway Design
- Public Consultation

iTRANS Consulting was retained by the Region of Peel to conduct a class environmental assessment for the widening of a 10 km section of Mississauga Road to 4 and 6 lanes from Highway 401 to Queen Street. The design includes the structural design and phasing of a new structure over Highway 401 integrated with the planned Highway 401 core-collector system and a new interchange access for properties immediately to the north of Highway 401. The design also addresses sensitive environmental crossing the Credit River Valley and community issues and through the village of Huttonville.
