

Mount Joy GO Station

Markham, Ontario

Client:

Town of Markham

Services:

- Public Transit
- Travel Forecasting
- Environmental Assessment

iTRANS Consulting was retained by the Town of Markham to identify future station needs for the Stouffville GO Rail line to serve growth in the northern part of Markham. Options for addressing demand included the expansion of an existing commuter rail station and the construction of new stations. Evaluation criteria such as catchment area, accessibility, and compatibility with adjacent land uses were considered.

The study was undertaken consistent with the EA process by incorporating an evaluation of environmental and social impacts with public participation. Opportunities for private sector involvement were also investigated.
