

# Williams Parkway Environmental Assessment

## Brampton, Ontario

Client:  
City of Brampton

Services:

- Travel Forecasting
- Transportation Planning
- Environmental Assessment

iTRANS Consulting undertook the transportation assessment for the Williams Parkway Extension Environmental Assessment, located at the easterly limits of the City of Brampton, to the north of Highway 407.

This study involved land use and travel demand forecasting to quantify the need for the Williams Parkway extension to the east of Airport Road.

The level of detail required for the travel demand forecasts in this study involved intensive modelling of the Bram East Secondary Plan Area using EMME/2. EMME/2 was used to develop short and long-term travel forecasts for roads and intersections, and to assess different road network alternatives.
