

Queen Street / Highway 7 HOV Feasibility Study

Brampton, Ontario

Client:

City of Brampton

Services:

- Highway Engineering
- Traffic Engineering
- Travel Demand Management

iTRANS staff undertook and managed a multi-jurisdictional study to assess the feasibility of HOV lanes on Queen Street and Highway 7 through Brampton.

The study assessed HOV demand, analysed system operations using Transyt 7F, assessed technical benefits of arterial HOV lanes, and developed a staging and implementation plan.

In addition, the study involved consensus building among transportation planners, highway engineers, traffic engineers, land use planners and transit operators.
